

Project Documentation

Laptop Request Approval Workflow using ServiceNow Flow Designer

1. Project Title

Laptop Request Management with Manager Approval Workflow in ServiceNow

2. Project Objective

The objective of this project is to automate the laptop request process using ServiceNow Flow Designer.

The workflow should:

- Allow employees to request a laptop through Service Catalog.
 - Send the request for approval.
 - Create a task after approval.
 - Notify users through email.
 - Track the request lifecycle automatically.
-

3. Project Scope

Included

- Service Catalog Item Creation
- Flow Designer Workflow
- Approval Process
- Catalog Task Creation
- Email Notification

Excluded

- Procurement Integration
- Asset Management Automation
- External Vendor Integration

4. Project Architecture

1. Employee

- The employee submits a Laptop Request through the Service Catalog.

2. Service Catalog Item

- A catalog item named Laptop Request is created to collect user requirements.

3. Flow Trigger

- The Flow Designer is triggered automatically whenever a Laptop Request is submitted.

4. Ask For Approval

- The flow sends an approval request to the manager or designated approver.

5. Approval Decision

The approver reviews the request and chooses either:

- Approve
- Reject

6. Approved Path

If approved:

- A Catalog Task is created for the IT team.
- An approval email notification is sent to the requester.

7. Rejected Path

If rejected:

- No task is created.
- A rejection email notification is sent to the requester.

Milestone 1: Create Application

Objective

Create a custom application for Laptop Request Management.

Steps:

1. Open ServiceNow.
2. Navigate to: All → App Engine Studio
3. Click: Create App

Make the workflow operational.

Steps:

Click : Save

Then : Activate

Confirm activation.

Flow Activated

Milestone 11: Testing

Test Case 1 – Approval Scenario

Steps:

1. Open Service Portal.
2. Submit Laptop Request.
3. Approve request.

Expected Result

Validation	Status
Request Created	Approved
Approval Created	Approved
Approval Completed	Approved
Catalog Task Created	Approved
Email Sent	Approved

Test Case 2 – Rejection Scenario

Steps:

1. Submit Laptop Request.
2. Reject request.

Expected Result

Validation	Status
Request Created	Approved
Approval Created	Approved
Request Rejected	Approved
Rejection Email Sent	Approved

Issues Encountered During Development

Issue 1

Users/Groups field not visible in Approval Rule

Resolution:

Selected available approval rule and used test user account.

Issue 2

Task [task] table not available

Resolution:

Used available "Create Catalog Task" or "Create Task" action.

Project Outcome

The Laptop Request Approval Workflow was successfully implemented using ServiceNow Flow Designer. The solution automates request submission, approval management, task creation, and email notifications, reducing manual effort and improving request tracking and processing efficiency.
