

REQUIREMENTS PHASE

1.Introduction

The Requirements Phase is the foundation of the Laptop Request Management System project. This phase focuses on gathering, analyzing, and documenting the requirements needed to develop an efficient and automated laptop request process. The purpose of this phase is to understand the needs of the organization and ensure that the proposed solution meets both business and technical requirements.

The Laptop Request Management System is designed to automate the process of requesting, approving, and fulfilling laptop requests within an organization using the ServiceNow platform. The system aims to reduce manual effort, improve efficiency, and provide better tracking of requests throughout their lifecycle.

2.Requirement Gathering

The requirements for this project were gathered by analyzing the existing manual request process and identifying the challenges faced by employees, managers, and IT support teams.

The following issues were identified:

- Manual handling of laptop requests through emails.
- Delays in obtaining approvals.
- Lack of transparency in request status.
- Difficulty in tracking fulfillment activities.
- Increased administrative workload.

To overcome these challenges, an automated workflow solution was proposed using ServiceNow.

3.Business Requirements

The business requirements define the goals that the organization expects to achieve through the implementation of the system.

BR1: Automated Request Submission

Employees should be able to submit laptop requests through a centralized platform.

BR2: Approval-Based Processing

Every laptop request must be reviewed and approved by an authorized approver before fulfillment.

BR3: Automated Task Assignment

Approved requests should automatically generate tasks for the IT support team.

BR4: User Notifications

Employees should receive notifications regarding approval or rejection of their requests.

BR5: Request Tracking

The system should provide visibility into the status of requests throughout the process.

4.Functional Requirements

Functional requirements describe the specific features and functionalities that the system must provide.

FR1: Laptop Request Form

The system shall provide a Service Catalog form for employees to submit laptop requests.

FR2: Request Data Collection

The system shall collect the following information:

- Employee Name
- Department
- Laptop Type
- Justification
- Requested For

FR3: Workflow Trigger

The system shall automatically trigger a workflow when a laptop request is submitted.

FR4: Approval Management

The system shall send approval requests to the designated approver.

FR5: Approval Validation

The system shall verify whether the request is approved or rejected.

FR6: Catalog Task Creation

The system shall automatically create a Catalog Task when a request is approved.

FR7: Email Notifications

The system shall send email notifications for both approval and rejection outcomes.

FR8: Status Monitoring

The system shall maintain request status information throughout the workflow lifecycle.

5.Non-Functional Requirements

Non-functional requirements define the quality and performance characteristics of the system.

Performance Requirements

The system should process requests and approvals with minimal delay.

Reliability Requirements

The workflow should execute consistently without failures or interruptions.

Security Requirements

Only authorized users should be allowed to submit, approve, or fulfill requests based on their assigned roles.

Availability Requirements

The system should be available to users whenever required during business operations.

Scalability Requirements

The solution should support increasing numbers of users and requests without affecting performance.

Usability Requirements

The request form and workflow should be easy to use and understand for all employees.

6. User Requirements

The system serves multiple categories of users, each with different responsibilities.

Employee

- Submit laptop requests.
- View request status.
- Receive email notifications.

Manager/Approver

- Review submitted requests.
- Approve or reject requests.
- Monitor approval activities.

IT Support Team

- Receive Catalog Tasks.
- Fulfill approved requests.
- Update task status.

System Administrator

- Manage system configurations.
 - Maintain workflows and notifications.
 - Monitor system performance.
-

7. Software Requirements

The project requires the following software components:

Component	Purpose
ServiceNow Platform	Application Development
Service Catalog	Request Submission
Flow Designer	Workflow Automation
Approval Engine	Approval Management

Component	Purpose
Email Notification Service	User Communication
Web Browser	System Access

8. Hardware Requirements

The system can be accessed using standard computing devices.

Minimum Requirements

- Desktop or Laptop Computer
- Internet Connection
- Modern Web Browser
- Access to ServiceNow Instance

No additional hardware infrastructure is required since ServiceNow is a cloud-based platform.

9. Constraints and Assumptions

Constraints

- The system operates within the ServiceNow platform.
- Workflow functionality depends on user roles and permissions.
- Email notifications require proper email configuration.

Assumptions

- Employees have valid ServiceNow accounts.
- Approvers are correctly assigned within the system.
- IT support personnel are available to fulfill approved requests.

10.Requirement Analysis Outcome

The Requirements Phase successfully identified the business objectives, user needs, functional requirements, and technical requirements of the Laptop Request Management System. The collected requirements provide a clear understanding of the system's expected functionality and establish a strong foundation for the design and implementation phases.

The outcome of this phase ensures that the proposed solution aligns with organizational goals while improving efficiency, transparency, and overall request management within the ServiceNow environment.
